Suwanee Pedestrian Tunnel
Suwanee, GA

PROJECT OVERVIEW AND CHALLENGES

Bradshaw Construction installed 62' of 156" steel liner plate tunnel by conventional hand mine methods through a railroad embankment for a pedestrian tunnel. Hand mine techniques were utilized to install the liner plate tunnel under an active Norfolk Southern Railroad with only 7' of cover. Mining took six days to complete, working around the clock. After completion of the excavation, a shotcrete lining was placed on the inside to create the finished product.
