College of William & Mary Historic Campus Utility Improvements, Ph 1, Water Distribution Lines
Williamsburg, VA

PROJECT OVERVIEW AND CHALLENGES

The project for the College of William and Mary involved the construction of twin 600' by 60” diameter runs. 48” ID RCP was jacked behind a 60” diameter Akkerman TBM. Ground conditions encountered on the job included clay with some wet sand layers. The tunnels were used for steam and chilled water lines.
